Hey everybody, it's Randi from Think Lyme. We hope you and your families are staying safe and well during these unfortunate times. With the outbreak of COVID-19 we know you're going to be spending a lot more time outdoors. Ticks are rampant right now. Please protect yourself and your loved ones from Lyme disease and tick borne infections. Some things that we do around here is several times a year we spray our lawn and property with tick and mosquito spray. We also put down Dominic's tick tubes. The animals that live in your properties will feed on these tick tubes. The ticks that live on the animals will in turn die. Additional things that we do is we spray our shoes and clothing with permethrin. With proper usage, this can last on your clothes for up to seven washes. Additionally, we use insect repellent every time we go outside, whether it's for garden sprays or all natural lemon and Eucalyptus, so please stay safe and well and thank you.
